

Mesh Filters

Filter Classification: General filters, High efficiency filters, Precision filters.

Material: Stainless steel mesh, Sintered mesh, Sintered felt, Special alloy materials and other high-efficiency filter materials formed by extrusion molding and welding. Filter media can range from large to small or even micron accurate.

Product Category: Multi-layer sintered mesh, Multi-layer welded mesh, Multi-layer mesh cylinder, Net frame, Special-shaped net bucket etc.

Application: Pharmaceutical, chemical, food processing, oil refining, water treatment, scientific experiments, waste gas treatment etc.

Features: Among all filter materials, metal filters have the advantages of high strength, pressure resistance, uniform force, high temperature resistance, and high pore content in the connecting pores.
